## ABSTRACT

As part of the ninth annual Higher Education General Information Survey (HEGIS) conducted by the National Center for Education Statistics, an inventory of physical facilities at colleges and universities for fall 1974 was undertaken. The inventory provides a benchmark for facilities against which current conditions may be tested by persons in various organizations (e.g., institutional, state, regional, and national). The study is built on an actual inventory of space, based on a classification system codified in the "Facilities Inventory and Classification Manual, 1973." By employing a standard set of definitions and format for data collection, individual institutions may meaningfully compare themselves with other institutions. In addition to statistical tables, the report contains a guide to use of data and a summary of findings. The summary concerns trends, building characteristics, room-use, average square feet per full-time-equivalent student, program category, and housing. A sample survey questionnaire is appended. (SW)

## HIGHLIGHTS

1. In fall 1974, institutions of higher education reported a gross floor area of more than 2 billion square feet. About two-thirds (1.3 billion square feet) of the gross area was classified as assignable.
2. Of the gross area, more than 1.6 billion square feet were reported in satisfactory condition. However, 390 million square feet (19.3 percent of all space) were reported in need of remodeling, demolition, or termination.
3. Over one-third (36.2 percent) of all space, reported in gross square feet, has been constructed since 1965. More than three-fifths (61.7 percent) of the space reported by public 2-year institutions has been constructed since 1965. Approximately one-quarter (27.2 percent) of space at private institutions has been constructed since 1965.
4. The data reported by room type are in assignable square feet and indicate that the largest percentage (26.6 or 360 million square feet) was reported as residential space. Eight percent was classified as classroom space; an additional 14.3 percent was classified as laboratory space.
5. Of total assignable space in 1974 there were 173.6 square feet per full-time-equivalent (FTE) student. For each FTE student, 39.1 square feet were reported as classroom and laboratory space and 46.4 square feet as residential space.
6. Assignable space was reported by program classification for the first time in 1974. Data using this new classification show that nearly one-third (433 million square feet) of total assignable space was for the instructional program.
7. Design capacity of institutionally owned or operated housing exceeded 2.1 million beds or spaces. Nearly 2 million were reported as occupied—a total occupancy rate of 91.1 percent.

## NATIONAL CENTER FOR EDUCATION STATISTICS

"The purpose of the Center shall be to collect and disseminate statistics and other data related to education in the United States and in other nations. The Center shall . . . collect, collate, and, from time to time, report full and complete statistics on the conditions of education in the United States; conduct and publish reports on specialized analyses of the meaning and significance of such statistics; . . . and review and report on education activities in foreign countries."—Section 406(b) of the General Education Provisions Act, as amended (20 U.S.C. 1221e-1).

## FOREWORD

The present Inventory of College and University Physical Facilities has been conducted as part of the ninth annual Higher Education General Information Survey (HEGIS) of the National Center for Education Statistics for the academic year 1974-75. This is the third year that all operations of the survey, from the collection of the initial reports through the editing process to the preparation of final computer tape, were carried out under contract with Higher Education Facilities Services, Inc. (HEFS), a corporate subsidiary of the Association of Executives of the State Higher Education Facilities Commissions. Earlier surveys by HEFS collected data for fall 1970 and 1971.

The fall 1974 inventory used the terminology and definitions set forth in the *Facilities Inventory and Classification Manual, 1973* (OE) 74-11424. More extensive than prior facilities surveys in the HEGIS series, the present survey obtained data for condition, ownership, recency of construction, room use, a new classification of space by program category, and data on design capacity and actual occupancy of housing.

We wish to thank the State coordinating commissions, the State facilities commissions, and particularly the nearly 3,000 college administrators who supplied the data for this survey.

Theodore H. Drews, Acting Director  
Division of Survey Planning and Analysis

Edith M. Huddleston, Acting Chief  
Higher Education Surveys Branch

### ACKNOWLEDGMENTS

Publication of statistical reports is by its nature a cooperative effort. Many persons devoted hours to the completion of this final product. Particular mention should be made of Ruth J. Page and Angelyn T. McLilly who, in addition to other tasks, reviewed many tables for completeness and accuracy, and assisted in the preparation of summary tables. Eugene Hixson and Nadine S. Rousselle were helpful in developing special purpose tabulations that provided greater analytical flexibility. L. E. Hull provided constant support and expertise in the writing and development of tabular presentation for the summary analysis. Joseph Teresa, Nicolas Osso, and B. Berman provided incisive and critical review of the text and basic tables.

| 9B. Distribution of assignable area in institutions of higher education, by program classification, enrollment size, and by room-use category: private institutions: Aggregate United States, September 30, 1974 .....              | 54 |
| 10. Design capacity and actual occupancy of institutionally owned or operated housing in institutions of higher education, by enrollment size, control, and level of institution: Aggregate United States, September 30, 1974 ..... | 58 |

## PURPOSE OF SURVEY

The *Inventory of Physical Facilities at Colleges and Universities, Fall 1974* is designed to serve several purposes. As the most comprehensive and complex of the physical facilities surveys to date, it provides a benchmark for facilities against which current conditions may be tested by persons in various organizations; e.g., institutional, State, regional, and national. It not only permits comparisons of selected characteristics with past facilities inventories but fills the need for planning and allocation of resources.

By employing a standard set of definitions and format for data collection, individual institutions may meaningfully compare themselves with other institutions. Officials at State-level agencies will have the capacity to establish normative criteria, while similar

benefits accrue to Federal agencies when they develop assessments and descriptions of national need and performance.

More specifically, the study of physical facilities at colleges and universities is built on an actual inventory of space, based on a classification system codified in the *Facilities Inventory and Classification Manual, 1973*. The manual is intended to facilitate:

1. internal management and planning;
2. accurate inventories of buildings and rooms essential to planners concerned with predicting facilities needs for the foreseeable future;
3. implementation of State and Federal programs in allocating funds among competing requests for support.

## GUIDE TO USE OF DATA

This section, guide to the use of data, is presented at this point in the text for several reasons. First, the relative complexity of the facilities inventory requires that the reader become familiar with the terms being used and their definitions. Second, the data in the report have been summarized into a relatively few number of tables and some acquaintance with the meaning is desirable before reviewing the material. Third, the reader, by understanding the meaning of the terms used, can more rapidly locate the information of interest.

### Definitions

The following definitions were used in collecting physical facilities data for colleges and universities:

#### Building

A roofed structure for permanent or temporary shelter of persons, animals, plants, or equipment.

Included in the inventory are buildings under the jurisdiction or control of the institution's governing board, whether owned or not and whether in active use or not. Excluded are those buildings located on remote institutional properties and/or used by relatively small portions of the student body for only a short period of time each year; investment properties; hospitals not owned by the institutions, even though some limited research and instruction may be carried on in them; public schools not owned by the institution but used for practice teaching; and Federal contract research centers.

### Building Characteristics

1. **Condition**—The physical status and quality of the building at the time of the inventory, based on the best judgment of those responsible for campus development. The categories used and their definitions are: *Satisfactory*—requires no changes, meets acceptable standards. *Remodeling A*—requires restoration to present acceptable standards without major

room-use changes, alterations, or modernization of the building. The approximate cost of Remodeling A is not greater than 25 percent of the estimated replacement cost of the building. *Remodeling B*—requires major updating and/or modernization of the building. The approximate cost of Remodeling B is greater than 25 percent, but not greater than 50 percent of the estimated replacement cost of the building. *Remodeling C*—requires major remodeling of the building. The approximate cost of Remodeling C is greater than 50 percent of the replacement cost of the building. *Demolition*—should be demolished or abandoned because the building is unsafe or structurally unsound, irrespective of the need for the space or the availability of funds for a replacement. *Termination*—planned termination or relinquishment of occupancy of the building for reasons other than unsafeness or structural unsoundness, such as abandonment of temporary units or vacating of leased space.

2. **Year of Construction**—The calendar year in which the original building was completed regardless of later date of occupancy, as in the case of leased or rented buildings.

3. **Ownership**—The agency with which the title to the building rests. The definitions of the reporting categories are: a) Owned in fee simple. b) Title vested in the institution and being paid for on an amortization schedule (regardless of whether the building is shared with another institution or organization). c) Title vested in a holding company or building corporation to which payments are being made by the institution; title will ultimately pass to the institution (includes lease-purchase arrangements). d) Not owned by the institution, but leased or rented to the institution at a typical local rate. e) Not owned by the institution, but made available to the institution either at no cost or at a nominal rate. f) Not owned by the institution, but shared with an educational organization that is not a postsecondary educational institution. g) Not owned by the institution, but shared with another post-secondary educational institution. h) Other (e.g., not owned by the institution, but shared with a noneducational institution).

#### Room-Use

Room-use refers to the actual activity or purpose of the room and has no necessary connection with the characteristics of the particular room being classified. The classification has remained essentially unchanged since the first HEGIS facilities survey in

1968. The *Facilities Inventory And Classification Manual, 1973* (OE) 74-11424, appendix 6.8, pp. 137-140, presents a comparison of Room-type and Room-use codes.

#### Program Classification

A program is a set of activities collectively designed to achieve a well-defined objective or set of objectives within the institution. Hence, a program category is a grouping of similar or related activities by discipline area or major function. The categories are fully detailed in the *Facilities Inventory and Classification Manual, 1973*, appendix 6.3, pp. 87-103.

#### Design Capacity and Actual Occupancy

The design concept and the actual occupancy frequently differ. Design indicates the architect's intent when designing the building or room; the intent may be changed during actual use. Capacity and occupancy of apartments and houses refer to students and faculty and do not include members of their families who reside with them. Thus, one apartment may accommodate four single students and an identical apartment assigned to a married student accommodate one person even though the married student has a wife and two children.

#### Survey Universe

Of the 3,038 institutional units included in the higher education universe for 1974 and reported in this publication, there were 244 nonrespondents (see list in appendix A), comprising 3.5 percent of the total gross square feet and 3.6 percent of assignable square feet reported in this publication.

Two methods of imputation were used for nonrespondents. Under the parallel school method, the data of another institution with approximately the same enrollment and program offerings as listed in the *Education Directory, Higher Education, 1974-75*, were used. Under the derived-data method, tables were constructed for each of the six types of institutions (public and private universities, 4-year, and 2-year) showing the percentage of space in each cell of Form 2300-7 (as of September 30, 1974). Several tables were constructed for each type to account for different size enrollments. Source data for these tables came from a group of institutions whose facilities data were known to be accurate. A form was constructed for each nonresponding institution, using its enrollment and the appropriate table.

## Computer Tapes and Additional Data

Data for individual institutions will not be published. Institutional data, comparative data for groups of institutions or particular facility categories, or additional data available from HEGIS surveys can be obtained through the EDSTAT system. These may be obtained through purchase as computer tapes or as "on line access" capability, or through limited requests directly as selected printouts.

Requests for information or inquiries regarding availability of information in any of the above forms should be addressed to:

EDSTAT

Statistical Services Branch

National Center for Education Statistics

400 Maryland Avenue, S. W.

Washington, D.C. 20202

Telephone inquiries: (202) 245-8760

## Organization of Tables

Presented in 10 tables, data are reported by enrollment size (total number of students enrolled), control (public and private), and level of offering (university, other 4-year, and 2-year). Table 7 provides data by region, State, or other area. Data have not been rounded and totals are merely the addition of data reported by each institution; therefore, care must be exercised to avoid the assumption that such numbers are accurate to the last few digits. Similarly, although percentages are calculated to the nearest tenth of 1 percent, that should not imply that level of accuracy.

The following matrix describes the format and type of information for the 10 tables; table numbers are shown in the columns.

*Schema of data presentation and type of data in basic tables*

| Vertical distribution        | Gross and assignable | Gross square feet |           |     | Assignable square feet |         |
|------------------------------|----------------------|-------------------|-----------|-----|------------------------|---------|
|                              |                      | Conditions        | Ownership | Age | Room-use               |         |
|                              | No. & %              | Percent of total  |           |     | Number                 | Percent |
| Enrollment size              | 1                    | 2                 | 3         | 4   | 5                      | 5A      |

## SUMMARY OF FINDINGS

The analysis contained in this section of the publication is of a summary nature. It relies almost exclusively upon the basic tables reproduced in the succeeding section of this publication. Whenever data are presented that use percentage distributions different from those contained in the basic tables, a text table is provided.

### Trends

By fall 1974, more than 1.3 billion square feet of assignable space were reported by institutions of higher education. This is the largest amount of assignable space ever reported. Substantial growth (31.4 percent) in total assignable space owned or operated by colleges and universities for educational and educationally related purposes occurred between 1968 and 1974. The largest growth during the 6-year period occurred in public 2-year colleges where the total assignable space almost doubled (91.0 percent). The 2-year private colleges reported less space in 1974 than in 1968, resulting in a decrease of 6.4 percent. (See table A.) Upon more detailed analysis,

it might be found that the increase in the number of public 2-year colleges and the decrease in the number of private 2-year colleges would account for the respective changes.

Despite the rapid growth of higher education's physical facilities, other primary elements have grown even more rapidly. Current expenditures and student enrollments exceeded the 31.4-percent increase shown by facilities. (See table B.) Enrolled students rose from 7.5 million in 1968 to 10.3 million in 1974 (a 36.3-percent increase). Expenditures (excluding Federal Contract Research and Development Centers) were \$17.9 billion in 1968-69 and rose to \$34.2 billion in 1974-75 (a 91.1-percent increase).

Estimates for total gross square feet were published in 1968; findings from the 1974 data appear in basic table 1, page 10. The trend is towards an increased proportion of all space being reported by publicly controlled institutions: from 59.8 percent in 1968 to 64.5 percent in 1974. Also discernible is the fact that a decrease (69.1 to 66.7 percent) in the proportion of assignable space as a percentage of gross space occurred between those two periods. Both sets of relationships can be seen in table C.

*Table A.—Assignable area in buildings of institutions of higher education, by control and level of institutions: Aggregate United States, fall 1968, 1971, and 1974  
(Area in thousands of square feet)*

| Control and level of institution  | Assignable square feet <sup>1</sup> |                   |           | Percent change |         |         |
|-----------------------------------|-------------------------------------|-------------------|-----------|----------------|---------|---------|

| 2-year institutions               | 26,000                              | 25,749            | 24,336    | -.1            | -6.4    | -5.5    |

Because of rounding, detailed data may not add to totals.

<sup>1</sup>"Assignable square feet" is defined as the sum of all areas on all floors of a building assigned to, or available for assignment to, an occupant, including every type of space functionally usable by an occupant (except space defined as custodial, circulation, mechanical, or structural areas).

<sup>1</sup>*Opening Fall Enrollments, 1968, 1971, and 1974*: data in absolute numbers.

<sup>2</sup>*Financial Statistics of Institutions of Higher Education, Current Funds Revenues and Expenditures, 1968-69, 1971-72, 1974-75*: data unpublished. Dollars are in thousands; no adjustment has been made for inflation; expenditures exclude Federal Contract Research and Development Centers.

<sup>3</sup>Data are assignable square feet, reported in thousands of square feet.

*Table C.—Changes in distribution of gross and assignable square feet in institutions of higher education, by control, between 1968 and 1974*

| Control                                      | 1968  |            | 1974  |            |
|----------------------------------------------|-------|------------|-------|------------|
|                                              | Gross | Assignable | Gross | Assignable |
| Total number<br>(in millions of square feet) | 1,486 | 1,026      | 2,020 | 1,348      |
| Percent                                      | 100.0 | 100.0      | 100.0 | 100.0      |
| Publicly controlled                          | 59.8  | 60.1       | 64.5  | 64.1       |
| Privately controlled                         | 40.2  | 39.9       | 35.5  | 36.0       |

### Building Characteristics

The physical condition of each building was reported in gross square feet, using one of six different categories: satisfactory, remodeling A, remodeling B, remodeling C, demolition or termination (see definitions on pps. 1-2). The data were aggregated by category and a percent distribution was calculated (see basic table 2). More than 1.6 billion square feet (80.7 percent) were in satisfactory condition. Almost a quarter (22.3 percent) of the space in public institutions was not in satisfactory condition, whereas only 14.0 percent of the space in private institutions was reported as being in less than satisfactory condition.

Eight categories were available for reporting ownership (see definitions, page 2 and basic table 3). More than 1.9 billion (96.2 percent) of all gross square feet were owned by the institutions (in fee simple, institutional amortizing, or holding company amortizing). About 3 percent of reported space was rented or leased. The largest proportion of rented space was at 2-year private institutions, which reported almost 2 million square feet as rental property. Public 2-year institutions reported over 8 million square feet (3.8 percent of total space) as rental space—the largest amount of space rented by a specific type of institution. The recency of founding of many public 2-year colleges would appear to explain the relatively heavier reliance upon rental space by this type of institution.

Almost 70 percent of space in buildings of institutions of higher education has been constructed since 1951 or within 25 years. Private universities reported the greatest proportion of space built before

1951, 45.2 percent of all space. Public 2-year institutions reported that 85.5 percent of their space was constructed within the last 25 years and that 61.7 percent has been constructed since 1966.

### Room-Use

The data reported by type of room-use are in assignable square feet and the largest percentage (26.6, or 360 million square feet) was reported as residential space (see basic tables 5 and 5A). Eight percent was classified as classroom space; an additional 14.3 percent was classified as laboratory space. Office and study facilities accounted for 19.7 percent; 28.4 percent was reported in special use, general use, supporting and health-care space. Only 2.3 percent of the space was unclassified.

Table D provides percentage distributions for each room-use category by control and level. Over 50 percent of all classroom space is at other 4-year institutions; the same institutions account for about 40 percent of all laboratory space. Another category where concentration of one type of space occurs is in residential facilities, with 57.8 percent of all residential space reported by other 4-year institutions and 94.8 percent by universities and other 4-year institutions combined. Health-care facilities were found almost exclusively at 4-year institutions (98.0 percent) while supporting facilities (data processing/computer, shop storage, vehicle storage, etc.) were primarily at 4-year institutions (90.0 percent).

### Average Square Feet Per Full-Time-Equivalent Student

Assignable space by room-use categories was used to arrive at average figures for the square feet per

Table D.—Percent distribution by room-use category<sup>1</sup> of assignable area in buildings of institutions of higher education, by control and level of institutions:  
Aggregate United States, September 30, 1974

| Control, and level of institution | Total assignable | Classroom | Laboratories | Office  | Study  | Special use | General use | Supporting | Health care | Residential | Unclassified |
|-----------------------------------|------------------|-----------|--------------|---------|--------|-------------|-------------|------------|-------------|-------------|--------------|

Detailed data may not add to totals, due to rounding.

<sup>1</sup> Room-use categories are defined and described in *Facilities Inventory and Classification Manual*, 1973, GPO, (OE) 74-11424, pp. 47 ff.

full-time equivalent (FTE) student. The average was derived by dividing the total square feet for each room-use category by the total FTE students for that particular institutional classification. Two tabulations are presented in the basic tables: table 6 presents data by enrollment size, control, and level; table 7 presents data for each State and region or other area. The differences found in the data included in both basic tables suggests the value of additional analysis. Such an analysis is more properly reserved for an analytical report.

For all schools there were a total of 173.6 square feet per FTE student; 39.1 square feet were reported as classroom and laboratory space per FTE student. Office and study facilities per FTE student were 34.4 square feet; 46.6 square feet were available as residential space. All other classified facilities were 49.7 square feet per FTE student and 4.0 square feet per FTE student were unclassified space. Privately controlled institutions reported a larger figure (259.7 square feet) for each FTE student; public institutions reported a total of 146.3 square feet per FTE student. A major part of this difference is found in the residential space where private institutions had 84.8 square feet per FTE student and public institutions reported 34.2 square feet.

The average figures appearing in basic table 7 are presented by State and other geographical groupings. These data present a more even or smoother pattern of distribution. The range of square feet per FTE student for classroom space is from 8.1 in California to 24.4 in Mississippi. The residential space average by State ranges from 12.3 in Nevada to 90.3 in Mississippi.

Statistical measures for potential use as normative indices are presented in basic table 8. The median and 4 percentiles are reported by enrollment size and control for each room-use category. Planners and other administrators will find the detailed data of significant interest for specific purposes. Caution must be exercised in using these measurements, as a particular set of data cells may be severely affected

by slight inconsistencies in reporting on two different questionnaires. Nevertheless, these are the best available data.

### Program Category

A new classification, program category, was requested in the 1974 survey of physical facilities. A detailed description of the classification as well as its relationship to other systems employed previously appears in the *Higher Education Facility Inventory And Classification Manual, 1973*.

Data reported using this new classification show that nearly one-third of all assignable space (433 million square feet) was for the instructional program. Nearly two-fifths of all space (513 million square feet) was devoted to student services, including student housing. Academic support (including libraries, teaching hospitals, etc.) accounted for over one-tenth of all space, or 141 million square feet. Additional detail can be found in basic table 9.

### Housing

Data obtained as housing use different measurement categories—specifically, dormitory beds, apartment spaces, and number of houses. Basic table 10 presents design capacity for housing students and other personnel, as well as actual occupancy. Design capacity of institutionally owned or operated housing exceeded 2.1 million beds or spaces. Nearly 2 million were reported as occupied—a total occupancy rate of 91.1 percent. (The occupancy rate for some types of institutions exceeded 100 percent. This occurs if a room has a design capacity of two, and three or four students are housed in the room.)

Public institutions reported 57.4 percent of the dormitory beds and 59.7 percent of apartment spaces; 51.1 percent of the houses were at public institutions. The occupancy rate in dormitories was highest in universities (96.2 percent) and lowest in 2-year-institutions (86.0 percent).

## Appendix A

### LIST OF NON-RESPONDING INSTITUTIONS

#### Alabama (4)

1023 Judson College  
1044 Stillman College  
1046 Talladega College  
12182 Chattahoochee Valley Community College

#### Alaska (2)

1069 U of Alaska, Sitka Community College  
11463 U of Alaska, Juneau Senior College

#### Arkansas (4)

1087 Arkansas Baptist College  
1094 College of the Ozarks  
1105 Shorter College  
1106 Southern Baptist College

#### California (27)

1116 Art Center College of Design  
1120 American Baptist Seminary of the West  
1126 American Baptist Seminary of the West, Covina  
1158 U.S. International University  
1173 Pomona College  
1194 Deep Springs College  
1241 Monterey Institute of Foreign Studies  
1252 Pacific Christian College  
1253 Pacific College  
1254 Pacific Lutheran Theological Seminary  
1255 Pacific Oaks College  
1279 San Francisco Theological Seminary  
1299 Saint John's College  
7478 San Diego CC, Evening College  
8846 The Wright Institute  
9240 Nairobi College

9844 California School of Professional Psychology, San Francisco  
10013 California School of Professional Psychology, Los Angeles  
10074 Saint Patrick's Seminary  
10229 D-Q University  
10441 Rand Graduate Institute for Political Studies  
10474 Marymount College of Palos Verdes  
11117 California School of Professional Psychology, San Diego  
11386 Windsor University  
11730 Indian Valley College  
10495 University Without Walls, Berkeley  
11881 California School of Professional Psychology, Fresno

#### Colorado (7)

1356 Loretto Heights College  
1372 Western State College of Colorado  
4508 University of Colorado, Medical Center  
7582 Aims College  
9008 Colorado Mountain College, East Campus  
9855 Yesh Toras Chaim Talmud  
9981 Morgan Community College

#### Connecticut (7)

1387 Hartford Seminary Foundation  
1393 Mitchell College  
1406 Southern Connecticut State College  
1407 Saint Alphonsus College  
1412 Saint Thomas Seminary  
1426 Yale University  
9030 University of Connecticut, Health Center

1. INSTITUTION CODE NUMBER

2. DUE DATE  
Not later than November 30, 1974

Items 1, 3, 4, 5, and 6 MUST be completed by all institutions. If applicable, complete items 7 and 8. Submit a separate survey form for each of the campuses or branch campuses of the institution. If it is impossible to provide separate data for any branch campus, and the data for that branch must be included in the parent institution's report, indicate this in item 8 below.

3. NAME AND MAILING ADDRESS OF INSTITUTION OR CAMPUS COVERED BY THIS REPORT (Include city, State, and ZIP code)

4. NAME AND TITLE OF RESPONDENT

5. TELEPHONE NUMBER OF RESPONDENT (Area code, local number and extension)

6. THE INSTITUTION COVERED BY THIS REPORT IS (Check only one)

(a) ☐ A SINGLE-CAMPUS INSTITUTION

(b) ☐ A MAIN CAMPUS ("Parent" institution) WITH ONE OR MORE BRANCH CAMPUSES AND/OR OTHER CAMPUSES (Specify in item 8 below)

(c) ☐ A BRANCH CAMPUS OF A PARENT INSTITUTION (Write the name of parent institution below)

(d) ☐ ONE OF THE ADMINISTRATIVELY EQUAL CAMPUSES OF A MULTI-CAMPUS INSTITUTION

7. IF THE INSTITUTION COVERED BY THIS REPORT IS INCLUDED IN AN "INSTITUTIONAL SYSTEM", WRITE THE NAME OF THE SYSTEM BELOW.

8. PARENT INSTITUTIONS (As checked in item 6b) SHOULD LIST THE NAMES OF ALL THEIR BRANCH CAMPUSES BELOW. USE THE FIRST COLUMN TO SHOW WHETHER DATA FOR ANY OF THESE UNITS ARE INCLUDED WITH THE DATA FOR THE "PARENT" IN THIS REPORT.

| ARE DATA FOR THIS UNIT INCLUDED IN THIS REPORT?          | NAME OF BRANCH CAMPUS AND/OR OTHER CAMPUS | ADDRESS<br>(City, State, and ZIP code) |
|----------------------------------------------------------|-------------------------------------------|----------------------------------------|
| <input type="checkbox"/> YES <input type="checkbox"/> NO |                                           |                                        |
| <input type="checkbox"/> YES <input type="checkbox"/> NO |                                           |                                        |
| <input type="checkbox"/> YES <input type="checkbox"/> NO |                                           |                                        |

## DEFINITIONS

**MULTI-CAMPUS INSTITUTION.** An organization bearing a resemblance to an institutional system, but unequivocally designated as a single institution with either of two organizational structures: (1) an institution having two or more campuses responsible to a central administration (which central administration may or may not be located on one of the administratively equal campuses) or (2) an institution having a main campus with one or more branch campuses attached to it.

**MAIN CAMPUS.** In those institutions comprised of a main campus and one or more branch campuses, the main campus (sometimes called the parent institution) is usually the location of the core, primary, or most comprehensive program. Unless the institution-wide or central administrative office for such institutions is reported to be at a different location, the main campus is also the location of the central administrative office.

**BRANCH CAMPUS.** A campus of an institution of higher education which is organized on a relatively permanent basis (i.e., has a relatively permanent administration), which offers an organized program or programs of work of at least 2 years (as opposed to courses), and which is located in a community different from that in which its parent institution is located. To be considered in a community different from that of the parent institution, a branch shall be located beyond a reasonable commuting distance from the main campus of the parent institution.

**INSTITUTIONAL SYSTEM.** A complex of two or more institutions of higher education, each separately organized or independently complete, under the control or supervision of a single administrative body.

## INSTRUCTIONS

### GENERAL

1. An inventory of physical facilities is an integral part of an institution's management system and provides useful information at State and Federal levels which influences educational decisions. Other purposes of the survey are stated in the *Higher Education Facilities Inventory and Classification Manual*.

2. Please complete this form in duplicate and return it to the U.S. Office of Education, National Center for Educational Statistics, ATTENTION: HEGIS-Room 2164, 400 Maryland Avenue, SW., Washington, D.C. 20202, through designated channels.

3. The survey consists of four data parts. **Part A - Building Data** shows the total space on the campus characterized by condition, ownership, and age. It provides useful information both as to the adequacy of the amount of space and as to requirements to replace and remodel current space. The next two parts pertain to rooms. The last part gives capacity of housing.

**Part B - Total Campus by Room Use** shows the distribution of available space according to the use made of it. This information when related to personnel data, permits judgments as to the quantitative adequacy of the various types of space. **Part C - Total Campus by Room Use and Program Classification Categories** provides information which permits assessments regarding the functional distribution of space. **Part D - Design Capacity and Actual Occupancy of Institutionally Owned or Operated Housing** provides data pertaining to the adequacy of housing.

4. Detailed information required to complete this form, including definitions and descriptions of each item, may be found in the *Higher Education Facilities Inventory and Classification Manual*. If you need clarification on any item, contact your State agency or Mr. Arthur Podolsky, U.S. Office of Education, (202) 245-8392, in Washington, D.C.

### PART A - BUILDING INVENTORY

Include in the inventory those buildings under the jurisdiction or control of the institution's governing board, whether owned or not and whether in active use or not.

Exclude from the inventory those buildings located on remote institutional properties and/or used by relatively small portions of the student body for only a short period of time each year; investment properties; hospitals not owned by the institution, even though some limited research and instruction may be carried on in them; public schools not owned by the institution but used for practice teaching; and Federal contract research centers.

### PART B - TOTAL CAMPUS BY ROOM USE

Information required to complete Part B may be found in the manual in Section 2.0: The Inventory Process and Appendix 6.2;

Standard Room Use Categories. Note that most of these codes are the same as used in previous years, with the major exceptions that all rooms coded in the 800 series (Health Care Facilities), in the 900 series (Residential Facilities) and in the 000 series (Unclassified Facilities) will have to be assigned new codes. Appendix 6.8 of the manual identifies the codes which have been changed and therefore require special attention.

Report assignable square feet to the nearest foot.

The table has been reconstructed so that one adds normally to obtain totals. Codes ending in hundreds are summary codes and are obtained by addition. As in previous years, there are three other totals in the table; Line 60 Total Nonresidential Facilities, Line 67 Total Facilities in Use, and Line 72 Total Assignable Area.

### PART C - TOTAL CAMPUS BY ROOM USE AND PROGRAM CLASSIFICATION CATEGORIES

Information required to complete Part C may be found in the manual in Section 2.0: The Inventory Process and Appendix 6.3; Standard Program Classification Categories. The comparison of organizational unit codes of the first edition to program codes of the current edition of the manual, as shown in Appendix 6.9, may be helpful in deriving data for Columns (2) through (17).

Column (1) of Part C must be copied from corresponding entries in Part B. Then Columns (2) through (9) will add to Column (1) if no error has been made. It is not possible to similarly check the accuracy of Columns (10) through (17) because the space in these columns is assigned to subprograms which are of interest at the State/Federal levels. The space shown in Columns (10) through (17) is also included in the total program space shown in Columns (5), (6), or (7).

### PART D - DESIGN CAPACITY AND ACTUAL OCCUPANCY OF INSTITUTIONALLY OWNED OR OPERATED HOUSING

The design concept and the actual occupancy frequently differ. Design connotes the architects' intent when designing the building or room which may later be changed to a different level by the institution. It takes into consideration established criteria as to the amount of space per individual required to accommodate a particular function on the basis of the type of furniture and equipment being used in the facility. Actual use varies from time to time to meet current requirements. Capacity and occupancy of apartments and houses refers to students and faculty and does not include members of their families who reside with them. Thus an apartment may accommodate four single students and an identical apartment assigned to a married student accommodates one person even though the married student has a wife and two children residing with him.

The highest error frequency has occurred in Lines 60, 67, and 72 in previous surveys. \*Include here only that space which has lost its "use" identity by removal of furniture and other changes. Inactive classrooms will be included in the 110 space (line 1), inactive class laboratories in the 210 space (line 4), etc. Include all such space in program 8.0 of Part C.
